Unix

Projects

UCSD Basketball iOS App   *dssung.github.io/UCSD_Basketball*
Objective - C, xCode

- Designed and created view controllers for news, schedule, box scores, roster, player stats/profile, standings and team stats for both men and women teams.
- Created parser to scrape player and team stats from UCSD Athletics site's HTML table.
- Obtained links to schedule, scores and news through UCSD Athletics' RSS feed.
- Implemented with auto layout constraints

UCSD Trekker   *ucsdtrekker.herokuapp.com*
Node.JS/Express, AngularJS, Google Maps API, FullCalendar API, HTML/CSS, Bootstrap

- Designed and created interactive route tracer for UCSD students and their class locations
- Created calendar feature using FullCalendar API, which allows users to submit their
- Implemented toggle current location function which either routes from current location or first course.
- Currently extending app to feature "hotspot" locations by using Google Places API and user account settings allowing users to find nearby food/study/lounge/nap spots similar to Yelp.

Cook Top   *cooktop.herokuapp.com*
Node.JS/Express, Handlebars, JQuery, AJAX, Spoontacular API, HTML/CSS, Bootstrap

- Allows users to add/edit items into grocery list, which can then be moved to their inventory.
- Implemented recipe recommender based on user given preferences/restrictions by integrating Spoonacular API.
- Created wireframes of app pages using Sketch in order to modify and guide the design of web application

CodePath iOS Projects   *github.com/dssung/Yelp*

Swift, Yelp API, Twitter API, Parse

- Implemented and extended projects which include a Yelp clone, Twitter clone, Instagram and Parse Chat using their respective APIs and Parse.

Experience

Center for Applied Internet Data Analysis, SDSC   **March 2017 - Present**
Web App Developer, Research Assistant

- Designed and coded web app/game to collect crowdsource data on trace routes and quality of experience (QoE) at *http://crowdtrace.caida.org:8000*
- Implemented interactive map that plotted points and internet routes from database collections, using AngularJS and Ammap API.
- Created app wireframe and responsible for UI/UX design decisions.
- Developed front-end functions such as user accounts, game functionality, game walkthrough tutorial and admin dashboards using Blaze.
- Coded backend functions, such as user accounts, database security, admin functionality, location generation using Meteor and mongoDB.

The UCSD Guardian   **October 2013 - June 2015**
Associate Sports Editor

- Collaborated with the design team and editor board for layout of each biweekly issue
- Proofread 150+ staff articles and trained three staff writers for three future editor/writer positions.
- Interviewed multiple student athletes and coaches for over 70+ sports features and stories.
